

St. Maarten Medical Center

VACANCY: *Senior System Administrator*

St. Maarten Medical Center (SMMC) is an ambitious and growing hospital organization on St. Maarten. With more than 425 FTE's, 28 Specialists and a capacity of 80 beds, we continuously strive to ensure safe, quality health care. Our primary service area of St. Maarten, Statia and Saba, represents a total population of approximately 60,000 people, constituting a multi-cultural mix with more than 100 different nationalities. In addition, we also offer health care services to the two million visitors annually. SMMC has started the construction of the new St. Maarten General Hospital (SMGH) to expand its services in order to accommodate the increased care demand of the people of St. Maarten, its visitors and neighboring islands. The new hospital is planned to be operational in 2026.

Your Profile:

As a **Senior System Administrator**, you play a critical role in enhancing the efficiency and effectiveness of our hospital's communication and work processes. You provide essential technical support to optimize the flow of information and improve communication technology (ICT) services across the entire organization. In this position, you ensure the smooth operation of our IT infrastructure, troubleshooting and resolving issues to maintain seamless connectivity and workflow. Your expertise will directly contribute to improving our systems, enabling better collaboration among teams and more efficient patient care.

What We Offer:

We offer you a full-time position in an open, collaborative, and professional environment. In this role, you will have the chance to contribute to the evolving tech landscape within healthcare, where your skills and ideas will help shape the future of patient care and numerous opportunities for growth and career development.

Requirements:

- A Bachelor's Degree in Information Technology, Computer Science or equivalent as well as a Network Certification and experience in working with multiple operating systems;
- Certifications in CCNA, CompTIA Server+, CompTIA Security+ and Linux are required. MSCE certification is considered an asset;
- Leadership skills and experience in coaching teams;
- Proficiency in applications servers, client systems, management software packages;
- Extensive knowledge of switches, classified communications, DSL services, wireless services circuits, voice networks, and other division projects;
- Fluency in the English language is required.

Tasks:

- Evaluate user requirements and provide recommendations for enhancing network systems, applications, media, and communication tools;
- Review installation and maintenance strategies;
- Design, script, develop and deploy applications to optimize network and operating system performance and well as implementing approved system upgrades;
- Advise on, enforce, and implement policies governing the secure usage, storage, and access control of information, applications, and hardware;
- Collaborate with the ICT supervisory team, taking on the role of project leader for the installation and maintenance of application servers and operating systems;
- Accurately diagnose and analyze issues related to systems, applications, networks, security, hardware, and processes.
